- *1 The projector uses a type of liquid crystal panel that typically consists of millions of pixels. This panel is built with very high-precision technology to provide the finest possible image. Occasionally, a few pixels may remain turned on (bright) or turned off (dark). Please note that this is an intrinsic characteristic of the manufacturing technology that affects all products using LCD technology.
- *2 The projector uses a high-voltage mercury lamp that contains high internal pressure. This lamp may break, emitting a large sound, or fail to illuminate, due to impact or extended use. The length of time that it takes for the lamp to break or fail to illuminate varies greatly depending on individual lamp characteristics and usage conditions.
- *3 Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.
- *4 In dynamic mode, with dynamic iris on.
- *5 In cinema 1 mode, with dynamic iris on.
- *6 Shift range is limited during simultaneous horizontal and vertical shifting.
- *7 Effective in Rec. 709 picture mode.
- *8 CEC is an abbreviation for Consumer Electronics Control. Operation may not be possible with some connected equipment or settings.
- *9 With legs at shortest position.
- *10 Average value. May differ depending on models.
- *11 Operation range differs depending on environments.

*1 PON is the only command that is effective in standby mode; all other commands are invalid. The PON command is not accepted during lamp on control. After the lamp has been turned off and while the cooling fan is still operating, lamp on control will not be activated for about 85 seconds in order to protect the lamp.

*2 Do not send OSH commands continuously in a short period of time. Doing so may burst the lamp or shorten the lamp replacement cycle.

Command example

To set the input to HDMI 1, send the command as shown below.

```

STX      IIS      :      HD1      ETX
|         |         |         |
Start    Command   Parameter  End
    
```

NOTE: When sending commands without parameters, a colon (:) is not necessary.

Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector while it is operating.
2. Make sure there is an unobstructed space of 100 mm (3-15/16") or more around the projector's air intake openings.
3. If the projector is placed in a box or enclosure, ensure the temperature of the air surrounding the projector is between 0°C and 35°C (32°F and 95°F). Also make sure the projector's intake and exhaust openings are not blocked. Take particular care to ensure that hot air from the exhaust openings is not sucked into the intake openings.

**Direction of air intake and exhaust****Operating the projector continuously**

1. If the projector is to be operated continuously 6 hours or more, lamp replacement cycle duration becomes shorter.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
